TestPro Systems Partners with Value Engineering to Enable Advanced ATE Test Development and Training for Test Research Test Platforms

Huntsville, AL – Monday, November 7, 2005. TestPro Systems today announced a partnership agreement with Value Engineering as part of a strategy to deliver advanced training and test program development solutions for Test Research's TR-5001 and TR-8001 In-Circuit Test Platforms. The agreement follows TestPro's OEM and Distribution Agreement announced earlier this year with Taiwan-based Test Research Inc.

"TestPro Systems and Value Engineering have a long standing relationship," said Richard Wagner, President of TestPro Systems. "Value Engineering offers a wealth of experience in providing advanced in-circuit training programs and applications engineering support for in-circuit test. Our association with Value Engineering will offer our customers unprecedented local service."

"Value Engineering is pleased with the association of TestPro Systems and Test Research Inc.," said Vaughan Carlson, President of Value Engineering. "We believe that Test Research's TR-5001 and TR-8001 offers one of the best values for in-circuit test equipment available on the market today. We look forward to providing world-class service and support for our customers."

In addition to announcing the partnership agreement between the two companies, Mr. Wagner and Mr. Carlson outlined plans for web-based, distance learning products relative to the Test Research product line. "Mr. Carlson and Value Engineering have been leaders in developing distance learning programs for in-circuit test development," stated Wagner. "We believe these products are essential as our customers find it increasingly difficult to find the time and justify the cost of sending test engineers out for one or two weeks of off-site training. Web-based training is the wave of the future."

About TestPro Systems

TestPro Systems is a test engineering service provider for both in-circuit and functional test systems. For more information about TestPro Systems, please visit us on the web at www.testprosystems.com, or contact Mr. Jim Bell, National Sales Manager for TestPro Systems Inc. at 256-881-1625.
